

DRAFT SRBAC Vision

The South Carolina Savannah River Basin Advisory Council (SC SRBAC) shall strive for the development and improvement of a comprehensive state wide water planning program where:

- Water resource planning within SC and with Georgia is specifically tailored for the Savannah River Basin using SCSRBAC inputs.
- The SCSRBAC is recognized by state agencies as a source of stakeholders' needs, concerns and recommendations.
- Resource assessments, estimates of current and future water needs and gap assessments are based on the needs and wants of the basin stakeholders
- The SCSRBAC advocates for new or updated legislation or regulations to address needs in the basin.
- Management and operational decisions in both normal and extreme conditions are based on providing full consideration of economic, environmental and quality of life effects throughout the entire Basin
- Management and Operational processes developed and implemented by the SCSRBAC may be used as guidelines for all other South Carolina Basin Advisory Councils as they are formed.
